

# README

**PLEASE NOTE:** The following script is intended for masters only, in order to reduce the amount of calls to the server. In order to validate your personal pages use the good old way of uploading your HTML

## Usage

---

The usage is very simple. To run it `cd` with the terminal to the validator directory (for example `.../SAPProject/validator/`), and run

```
python main.py
```

Be sure to use `python` and not `python3`. That is it!
